DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 9, 2006 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2 and 8-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Chang (US Patent Application No. 2003/0022030).

Chang teaches a strain-relieved tunable dielectric thin film. The thin films preferably include a low dielectric loss substrate, a crystalline dielectric film, and a buffer layer (paragraph [0006]). Both the crystalline dielectric film and buffer layer may include

Art Unit: 1775

BST (paragraph [0006]) in a (111) orientation (paragraph [0032]). The thin film is taught as a MgO substrate (10), a BST (20) dielectric thin film disposed over the substrate (10), and a single layer electrode (22) formed on the BST thin film and separated from the MgO substrate (paragraph [0038] and Fig. 5a). The BST thin film completely covers the MgO substrate. Such films are used to develop low loss tunable microwave devices, such as voltage-controlled oscillators, tunable filters and phase shifters, which are known components of phase array antenna systems and satellite communication systems.

Response to Arguments

Applicant's arguments with respect to claims 1-2 and 8-9 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aaron S. Austin whose telephone number is (571) 272-8935. The examiner can normally be reached on Monday-Friday: 8:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jennifer McNeil can be reached on (571) 272-1540. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
